

A. Parisot

East Lansing, MI | parisot1@msu.edu |

Skills

Machine Learning & AI: Scikit-Learn, SciPy, TensorFlow, Keras, PyTorch, MATLAB Deep Learning Toolbox

Programming & Software Development: Python (OOP), C++ (OOP), Java

Databases: MySQL, SQLite, MongoDB, Microsoft SQL

Parallel & Distributed Computing: CUDA, GPU-accelerated training, Docker (containerized distributed compute), PyTorch Distributed Data Parallel (DDP), Python virtual environments (venv/conda)

Visualization: Matplotlib, Seaborn, ParaView, Microsoft Office Suite (Word, PowerPoint, Excel), LaTeX

Education

Michigan State University

East Lansing, MI

Bachelor of Science, Computational Data Science

December 2026

Studying the computational and mathematical foundations of data science, with coursework in AI, machine learning, algorithms, data structures, statistical modeling, database systems, and large-scale data analysis; building expertise in applying these methods to extract insights and develop data-driven solutions.

Universidad Pontificia Comillas

Madrid, Spain

Exchange program

January, 2025 – June 2025

Study abroad coursework (English and Spanish) in mechanical engineering; emphasis on rigid system dynamics and modeling

Experience

FEV NA

Auburn Hills, MI

AI/ML Controls Engineering Assistant - Internship

May 2026 – Present

- Architected and trained a hybrid LSTM–DQN reinforcement learning controller for series hybrid power request management, to reduce ECU simulation training time by 75% (8 weeks to 2 weeks) while maintaining controller performance objectives.
- Developed and optimized reinforcement learning pipelines, reward functions, replay buffer implementation, and simulation workflows across distributed multi-machine environments to improve controller convergence, stability, and training efficiency
- Built a wind shear physics module and validated coupler force and grade effect simulation environments for a controller developed for train power management, and validated the corresponding model architecture
- Automated Malfunction Indicator Lamp (MIL) verification test reporting by developing a Python-based report generation system, reducing report turnaround from a full day to under 5 minutes

Wang Lab of Computational Biology

East Lansing, MI

Technical Assistant

December 2025 – December 2026

- Visualized and analyzed genomic data using ParaView and Python to identify structural patterns and extract biological insights
- Applied statistical modeling and quantitative analysis to genomic structures, translating large (20+ gb csv files) biological datasets into conclusions on individuals predicted health.
- Collaborated and presented in a computational biology research environment, leveraging bioinformatics pipelines to create interpretable insights

MSU Computational Math, Science, and Engineering Department

East Lansing, MI

Undergraduate Learning Assistant

January 2024 – December 2026

- Educated 45+ students per class in Python and matrix algebra through active teaching; facilitated conceptual thinking about computer science
- Educated students in Git and PowerShell through in class examples and activities
- Hosted two weekly office hours to reinforce instruction through one-on-one lessons; graded 50 – 100 assignments weekly
